

Q)1

```
package com.labexam.entity;
```

```
public class BinarySearch {
```

```
    public int search(int arr[], int start, int end, int element) {
```

```
        if(start == end) {
```

```
            if(arr[start] == element)
```

```
                return start;
```

```
            else
```

```
                return -1;
```

```
        }
```

```
        int mid = (start + end) / 2;
```

```
        if (element == arr[mid])
```

```
            return mid;
```

```
        if (element > arr[mid])
```

```
            return search(arr, (mid + 1), end, element);
```

```
        else
```

```
            return search(arr, start, (mid - 1), element);
```

```
    }
```

```
}
```

```
package com.labexam.main;
```

```
import com.labexam.entity.BinarySearch;
```

```
public class BinarySearchMain {
```

```
    public static void main(String[] args)
    {
```

```
        BinarySearch obj = new BinarySearch();
```

```
        int arr[] = {10,25,42,55,64,77,86,99};
```

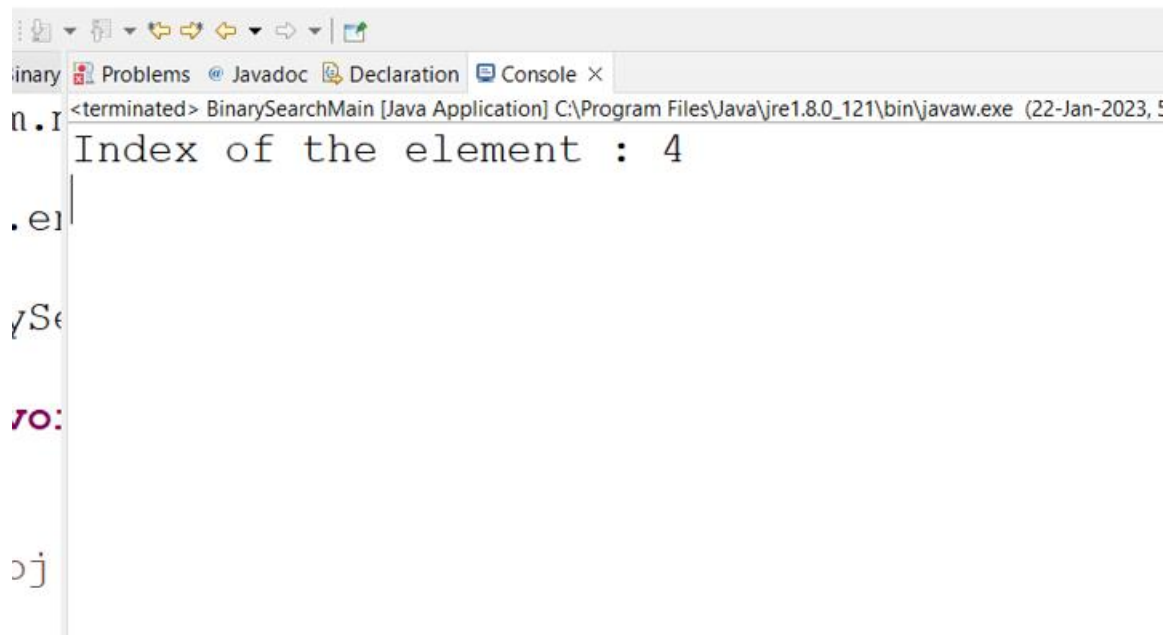

```
        int n = arr.length - 1;
```

```
        int element = 64;
```

```
        System.out.println("Index of the element : "+ obj.search(arr, 0, n,
element));
```

```
    }
```

```
}
```

The screenshot shows a Java IDE window with a console tab. The console output is:
<terminated> BinarySearchMain [Java Application] C:\Program Files\Java\jre1.8.0_121\bin\javaw.exe (22-Jan-2023, 5
Index of the element : 4

Q)2

```
package com.labexam.entity;

public class BinarySearchTree {

    class Node {
        int key;
        Node left, right;

        public Node(int item)
        {
            key = item;
            left = right = null;
        }
    }

    Node root;

    public BinarySearchTree() {
        root = null;
    }

    BinarySearchTree(int value) {
        root = new Node(value);
    }
}
```

```

    }

    public void insert(int key) {
        root = insertRec(root, key);
    }

    public Node search(Node root, int key) {

        if (root==null || root.key==key)
            return root;

        if (root.key < key)
            return search(root.right, key);

        return search(root.left, key);
    }

    Node insertRec(Node root, int key) {

        if (root == null) {
            root = new Node(key);
            return root;
        }

        else if (key < root.key)
            root.left = insertRec(root.left, key);
        else if (key > root.key)
            root.right = insertRec(root.right, key);

        return root;
    }

    public void postorder() {
        postorderRec(root);
    }

    public void postorderRec(Node root)
    {
        if (root != null) {
            postorderRec(root.left);
            postorderRec(root.right);
            System.out.println(root.key);
        }
    }
}

```

```
package com.labexam.main;

import com.labexam.entity.BinarySearchTree;

public class BinarySearchTreeMain {

    public static void main(String[] args) {

        BinarySearchTree tree = new BinarySearchTree();

        tree.insert(20);
        tree.insert(15);
        tree.insert(75);
        tree.insert(44);
        tree.insert(19);
        tree.insert(88);
        tree.insert(83);
        tree.insert(3);

        tree.postorder();

    }

}
```

```
